COLBERT NPDES ISSUES

Ali Raad, (DOE) and John Markus, (Landau) in a discussion on what else the County needs to do to meet the substantive requirements of an NPDES permit.

A diffuser for the outflow line in the Little Spokane river may now be required by Ecology. As a result they feel that the following studies should be conducted:

- Baseline sediment study
- Sediment toxicity study
- Sediment chemistry study
- Chronic toxicity study
- Acute toxicity study
- Macro benthic study (microorganisms)
- Particulate monitoring study
- SPCC (spill control containment study)

One additional concern at this time is that Ecology still has not released discharge limits for the treatment facility. We feel that this information is long overdue.
